

## Please specify a micro-controller Ide location

Visual Micro needs to know where, on your computer, application(s) such as the Arduino.exe are located.

If an application is not already installed then please download it using the 'Download/Install' button.  
Support for some platforms is still under development and we value feed back in our forum

1

\* Enter the ide folder location (example: c:\arduino)

2

Optional sketchbook location (best to leave empty, also affects the location of libraries/hardware)

4

Optional additional boards manager urls (url1,url2,url3 ...). Warning: Use safe urls from the link below

<https://github.com/arduino/Arduino/wiki/Unofficial-list-of-3rd-party-boards-support-urls>
